Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 12 September 2006.

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's Admitted Prior art (US 2007/0024507 A1, Specification, paragraphs [0005, 0006]) in view of Brown (US 5,764,194).

As to claims 1, and 2, Prior art teaches an antenna device comprising a plurality of antennas connected to a radio module through respective cables, the radio module being capable of selecting one or more of the antennas in good communication conditions, wherein a movable case is pivoted to a base case through a joint, and the radio module is contained in the base case, while the plurality of antennas are disposed in the movable case, the plurality of cables extending from the plurality of antennas being tied in a bundle to pass through a through hole provided in the joint, and being connected to the radio module; wherein the joint comprises a pivot portion projecting from one of the base and movable cases, a spherical portion provided on an end of the pivot portion, and a sphere receiving portion provided in the other case, to which the spherical portion fits so as to rotate freely, the through hole penetrating through the pivot portion 31 and the spherical portion to open to an inside of the one case and to an inside of the other case see paragraph [0005, 0006]. It is noted that Prior art does not

explicitly teaches that the joint is the three-dimensional joint. However, Brown teaches such three-dimensional joint is widely used in the art see Brown (figure 1, and column 3, lines 9-20). It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide Prior art's three dimension joint, as taught by Brown because both of their system is directed to antenna system.

Inquiries

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Huedung Mancuso whose telephone number is (571) 272-1939.
